1. Introduction

Circadian Calm is a fictional educational wellness brand developed as the central case study for this semester project in Digital Marketing. The brand's purpose is to provide structured, research-informed guidance to night-shift workers who experience chronic difficulty with sleep regulation, post-shift recovery, and daily functional wellbeing.

The inspiration for this project is rooted in direct professional experience. As a Brukerstyrt Personlig Assistent (BPA), a caring assistant role in the Norwegian care sector, the majority of my working hours are during night shifts. This experience provided first-hand insight into the challenges shift workers face: disrupted circadian rhythms, fatigue that extends into days off, and an absence of structured, evidence-based recovery guidance tailored to irregular schedules.

Existing wellness content largely targets a daytime population. Blog posts, sleep apps, and health education platforms assume regular sleeping hours, which renders them partially or wholly irrelevant to workers whose schedules invert the conventional day-night cycle. Circadian Calm was created to fill this gap by serving as an educational hub specifically designed for shift-based lifestyles.

This report documents the development of Circadian Calm across three core phases. Section 2 presents the strategic foundation, including audience analysis, competitor research, brand identity, and goal-setting. Section 3 describes the content created across three primary formats and one bonus format. Section 4 provides an evaluative discussion of how digital marketing principles — including branding, usability, accessibility, SEO, and ethical practice — were applied throughout the project. The report concludes with a measurement strategy outlining how success would be evaluated over time.

2. Analysis and Strategy

2.1 Target Audience

The primary audience for Circadian Calm consists of adults who work scheduled night shifts and experience sleep and recovery challenges as a direct result. Effective audience segmentation requires examining multiple dimensions: demographic, geographic, psychographic, and behavioural characteristics (Kotler and Armstrong, 2021).

Demographic Segmentation

Age: Primarily 20–45 years old. This range covers the majority of active shift workers in healthcare, emergency services, and essential industries.

Gender: All genders; no gender-specific targeting. The content is universally applicable.

Occupation: Healthcare assistants, nurses, emergency service workers (ambulance, fire, police), security personnel, factory and logistics workers, and care assistants.

Income: Low to middle income earners. This group is less likely to invest in premium wellness subscriptions; therefore, all Circadian Calm content is free and accessible.

Geographic Segmentation

Initial focus is on English-speaking markets, including the United Kingdom, Norway, Ireland, and Australia — countries where shift work in healthcare and emergency services is widespread and health literacy is reasonably high.

Psychographic Segmentation

The audience is motivated by a desire to reduce fatigue and improve quality of life, but often lacks time and energy to seek out complex solutions. They respond best to content that is concise, structured, and evidence-backed. They are likely to use mobile devices to access information between shifts or during breaks.

Behavioural Segmentation

This audience segment is in the consideration stage of the buyer journey — they are aware of their sleep problem but have not yet found a practical, tailored solution. They search for terms such as 'how to sleep after a night shift', 'caffeine and shift work', and 'night shift fatigue tips'. They are likely to engage with blog content and download practical tools if the perceived effort is low.

2.2 Buyer Persona

The buyer persona below synthesises the above segmentation analysis into a representative user profile, as recommended by content marketing best practice (HubSpot, 2023). This persona guided all content and design decisions.

Attribute	Detail
Name	Lina

Age	29 years old
Occupation	Night-shift Healthcare Assistant, Oslo
Location	Urban area, Norway
Education	Vocational health training
Income	Lower-middle income; values free/low-cost resources
Psychographics	Disciplined worker; frustrated by fatigue and lack of recovery; motivated by wellness when made simple
Pain Points	Cannot fall asleep after shifts; fatigued on days off; no structured recovery routine
Goals	Improve sleep quality; reduce burnout; build sustainable daily consistency
Content Preference	Short, structured, evidence-backed guides accessible on mobile
Channels Used	Google search, Instagram, Pinterest

Table 1: Buyer Persona — Lina, Night-Shift Healthcare Assistant.

2.3 Competitor Landscape

A competitive analysis was conducted to identify how Circadian Calm could differentiate itself within the digital wellness content space. Four key competitors were examined across different categories of online health and sleep education.

Competitor	Type	Strengths	Gap / Weakness
Sleep Foundation (sleepfoundation.org)	General wellness blog	High SEO authority; research-backed content; strong brand recognition	No shift-specific content; targets general adult population
Sleepopolis	Review & education site	Broad coverage; affiliate revenue; large audience	Daytime-centric; commercial focus over behavioural guidance
NHS Every Mind Matters (UK)	Government health portal	Credibility; free resource; accessible language	Generic sleep tips; not tailored to irregular-schedule workers
Circadian (app)	Mobile sleep-tracking app	Personalised data; strong UX	Paid premium; no educational content hub; no shift-worker focus

Table 2: Competitive Analysis — Circadian Calm vs. Key Competitors.

The competitive analysis reveals a consistent gap: while general sleep content is abundant, no major content brand specifically addresses the practical and behavioural needs of night-shift workers. Circadian Calm's competitive advantage lies in this specificity. By focusing exclusively on shift-worker recovery behaviour, using plain educational language, and offering content free of charge, the brand occupies a niche that established players have not prioritised.

2.4 Brand Identity

Brand identity encompasses all the visible and communicative elements that distinguish a brand and build recognition over time (Keller, 2013). The following table documents the brand identity decisions made for Circadian Calm and the rationale behind each.

Brand Element	Detail
Brand Name	Circadian Calm — 'Circadian' references the body's 24-hour biological clock, immediately signalling scientific credibility. 'Calm' conveys the emotional outcome the audience seeks.
Primary Colour	#4A7EBB (muted steel blue) — communicates trust, calm, and clinical reliability without appearing cold or corporate.
Secondary Colour	#F0F4FA (off-white/light blue) — used for backgrounds to reduce visual strain; important for an audience experiencing fatigue.
Accent Colour	#D9534F (soft red) — used sparingly for CTAs to create gentle urgency without alarm.
Typography	Serif headings for authority and readability; clean sans-serif body for digital accessibility. Both meet WCAG AA contrast requirements on light backgrounds.
Logo Concept	The wordmark 'Circadian Calm' is presented in a calm serif font. No icon was developed for this version; the text-based logo ensures readability at small sizes.
Tone of Voice	Supportive, structured, and informative. Avoids clinical jargon; uses second-person address ('you') to feel personal without being informal.
Mission	To provide structured, accessible sleep and recovery guidance for night shift workers.
Vision	To support long-term wellbeing through behaviour-based education.
Core Values	Practicality · Clarity · Consistency · Accessibility

Table 3: Brand Identity Elements — Circadian Calm.

2.5 SMART Goal

A SMART goal provides a measurable and time-bound target that keeps the content strategy focused and evaluable (Doran, 1981). The goal set for this project was:

> *"To achieve 50 newsletter subscribers and 200 monthly organic sessions on the blog within 6 months of launching Circadian Calm, by publishing SEO-optimised educational content targeting night-shift workers."*

This goal is Specific (targets newsletter subscribers and organic sessions), Measurable (numerical targets: 50 subscribers, 200 sessions), Achievable (realistic for a new niche content

site within 6 months), Relevant (directly tied to the brand's purpose of reaching and supporting shift workers), and Time-bound (6-month deadline).

2.6 Content Strategy

The content strategy for Circadian Calm is built around a single overarching content goal: to position Circadian Calm as the most practical and accessible online resource for night-shift sleep recovery, measured through newsletter subscriber growth and organic search traffic.

Three content formats were selected to support this goal at different stages of the buyer journey:

- Blog Post (Awareness/Education stage): Attracts organic search traffic from users actively seeking help. Targets informational search queries such as 'how to sleep after a night shift'.
- Landing Page (Conversion stage): Converts engaged visitors into email subscribers by offering a downloadable Night Shift Reset Checklist as a lead magnet.
- Email Newsletter (Retention/Engagement stage): Nurtures subscribers with regular, structured sleep tips and content updates, building long-term brand loyalty.

This three-stage structure ensures that content serves the user at each touchpoint: finding the brand, engaging with the brand, and returning to the brand. Future content development would include additional blog posts, a dedicated resource library, and a video series.

3. Content Creation

All content was developed to serve the strategic objective set in Section 2, targeting the buyer persona 'Lina' and guiding her through the Awareness → Consideration → Action journey. Each content format is documented below with its purpose, key features, and a direct link to the live content.

3.1 Content Format 1: Blog Post

Title: How to Sleep After a Night Shift: A Simple Routine That Works

Purpose: To attract organic search traffic by addressing one of the most common pain points identified in the buyer persona: difficulty sleeping after a night shift.

Buyer Journey Stage: Awareness / Education

The blog post provides structured, research-based sleep recovery guidance tailored specifically for shift workers. This distinguishes it from generic sleep hygiene content, which does not account for the physiological challenges of daytime sleeping. The content was grounded in peer-reviewed research (Caruso, 2014; CDC NIOSH, 2020; Drake et al., 2013; Chow, 2022; Watson et al., 2015) to ensure credibility.

Key Content Sections:

1. Why Night Shifts Disrupt Sleep — explains the science of circadian rhythm misalignment using accessible language
2. The 6-Step Post-Shift Sleep Routine — includes light management, caffeine cut-off timing, sleep environment optimisation, consistent sleep windows, days-off management, and wind-down strategies
3. FAQ section embedded within the post — addresses the most common questions identified in competitor research

Direct Link: https://www.oneohonejewelry.com/circadian-calm/how-to-sleep-after-a-night-shift/

The post applies SEO best practices including a keyword-rich H1 heading, use of secondary keywords throughout the body, structured H2/H3 subheadings, and internal linking to the landing page. The content ends with a clear call-to-action directing readers to download the Night Shift Reset Checklist.

One identified limitation was low colour contrast between the body text and the steel-blue background used in the initial design. This was flagged by WAVE accessibility testing (discussed further in Section 4.3). Future iterations would resolve this by using a white or off-white background for body text sections, with the blue reserved for header and CTA elements only.

3.2 Content Format 2: Landing Page

Title: Night Shift Reset Checklist — Reset Your Sleep After Night Shifts

Purpose: Lead generation; converting blog readers and direct visitors into email subscribers through a downloadable recovery checklist.

Buyer Journey Stage: Conversion

The landing page was designed according to conversion-focused best practices: a single objective (email sign-up), minimal navigation distractions, a clear value proposition, and a prominent CTA. The checklist offer was chosen as a lead magnet because it aligns directly with the buyer persona's need for practical, actionable recovery tools she can use immediately after reading.

Key Page Elements:

- Headline: 'Reset Your Sleep After Night Shifts' — uses the target keyword and addresses the persona's primary goal
- Problem framing: brief content block outlining why night shift sleep is difficult, validating the user's experience
- Value statement: lists specific benefits the checklist provides
- Email capture form with GDPR-compliant consent checkbox
- Research basis section — cites supporting research to build credibility

Direct Link: https://www.oneohonejewelry.com/circadian-calm/night-shift-reset/

3.3 Content Format 3: Email Sign-Up

Purpose: To build a subscriber list for ongoing educational communication via the Circadian Calm newsletter.

Buyer Journey Stage: Engagement / Retention

The email sign-up form is embedded within the Night Shift Reset landing page, creating a seamless conversion path from awareness (blog post) to action (sign-up). The form captures the subscriber's name and email address and includes an explicit consent checkbox, in accordance with GDPR requirements (European Parliament, 2016).

Upon sign-up, subscribers are entered into a welcome email sequence designed to deliver value immediately: the Night Shift Reset Checklist, followed by a series of educational emails covering sleep environment optimisation, caffeine management, and days-off scheduling.

Direct Link: https://www.oneohonejewelry.com/circadian-calm/night-shift-reset/

3.4 Newsletter Example

Purpose: To demonstrate the email content strategy in practice; to show how subscribers would be nurtured post-sign-up.

Format: Monthly educational newsletter, sent via an email service provider (e.g., Mailchimp).

CIRCADIAN CALM

The Night Shift Wellness Newsletter — Issue #1

Hi [First Name],

Welcome to the first edition of the Circadian Calm Newsletter. Each month, we share one practical, research-based strategy to help you sleep better, recover faster, and feel more like yourself — even on a night-shift schedule.

THIS MONTH: The Caffeine Cut-Off Rule

You already know caffeine helps you get through a night shift. But did you know that caffeine consumed within 6 hours of your planned sleep window can significantly reduce total sleep time and sleep quality (Drake et al., 2013)?

Your action for this month:

4. Identify your usual post-shift sleep window (e.g., 09:00–16:00).
5. Count back 6 hours from when you plan to sleep.
6. Set that as your caffeine cut-off time. (Example: sleep at 09:00 → stop caffeine by 03:00)

Small change. Real difference.

3.5 Bonus Content: FAQ Page

Purpose: To improve usability and accessibility by addressing anticipated questions upfront, reducing user friction and supporting users who may not be ready to navigate to the full blog post.

The FAQ page was developed as supplementary content addressing four key questions identified through competitor research and keyword analysis: how much sleep shift workers need, why consistent sleep timing matters, how caffeine affects recovery sleep, and why light management is important after shifts. Each answer references the research cited in the blog post (Watson et al., 2015; Chow, 2022; Drake et al., 2013; CDC NIOSH, 2020), reinforcing the credibility of the brand.

Direct Link: https://www.oneohonejewelry.com/circadian-calm/faq/

4. Evaluation and Discussion

This section evaluates how digital marketing principles were applied throughout the development of Circadian Calm, examining branding, usability, accessibility, SEO, and ethical considerations. Where tools were used to test the content, findings are discussed. The section also addresses the limitations identified in this first version and plans for improvement in future iterations.

4.1 Branding Implementation

Brand consistency is essential for building trust and recognition, particularly for a new brand operating in a credibility-sensitive wellness space (Keller, 2013). Circadian Calm's branding was applied consistently across all content formats through three primary mechanisms.

First, tone of voice was maintained throughout. All content uses a second-person address ('you'), avoids clinical jargon, and frames advice as practical guidance rather than instruction. This tone was chosen deliberately to make the audience feel supported rather than lectured to — an important distinction for users who are already fatigued and may be resistant to complex information.

Second, the colour palette of muted steel blue, off-white, and sparse red accents was applied across the homepage, blog post, landing page, and newsletter. These colours were chosen for their psychological associations: blue communicates calm and trustworthiness, while the limited use of red for CTAs creates action urgency without inducing stress (Elliot and Maier, 2014).

Third, the brand's mission — practical, accessible sleep guidance for shift workers — was made visible in the homepage headline, blog post introduction, landing page value proposition, and newsletter opener. This consistency ensures that a user arriving at any content format immediately understands what the brand offers and who it is for.

A gap identified during evaluation was the absence of a developed logo icon. In this project version, the brand relies on the wordmark alone. Future development would include an icon to improve brand recognition across social media profiles and email headers.

4.2 Usability

Usability refers to the ease with which a user can navigate a website and accomplish their intended goal (Nielsen, 1994). Several usability principles were applied during content development.

Navigation was simplified to five main menu items: Home, Night Shift Reset, Blog, Contact Us, and Privacy Policy, with FAQ as a secondary item in the footer navigation. This reduced cognitive load for users who may be accessing the site when tired. Call-to-action buttons were designed to be clear and direct: 'Start With the Night Shift Reset Checklist' and 'How to Sleep After a Night Shift' guide the user toward the two primary conversion goals without ambiguity.

Internal linking between content formats creates a logical user journey: a user arriving at the blog post is directed to the landing page CTA; a user on the landing page is directed back to the blog for further reading. This supports the buyer journey structure outlined in Section 2.6 and reduces the risk of users leaving the site without taking action.

One usability issue identified during development was the low contrast between the light-coloured body text and the steel-blue background used throughout the first version of the site. This created readability challenges, particularly on mobile devices. Future iterations will

implement a light background for body text sections, reserving the blue for headers and CTAs only.

4.3 Accessibility

Web accessibility ensures that content is usable by people with disabilities, including visual, cognitive, and motor impairments, and is evaluated against the Web Content Accessibility Guidelines (WCAG 2.1) (W3C, 2018). Two tools were used to assess the accessibility of Circadian Calm's content.

WAVE (WebAIM Accessibility Evaluation Tool): WAVE analysis of the blog post and landing page identified contrast errors as the primary issue. The light grey text used in the body copy against the medium-blue background did not meet the WCAG AA minimum contrast ratio of 4.5:1 for normal text. This is a significant finding that directly affects legibility for users with low vision or colour processing differences.

PageSpeed Insights (Google): PageSpeed Insights returned a Performance score of approximately 72 on mobile for the blog post page, with the main opportunities for improvement identified as image optimisation (no compressed hero images were used) and render-blocking resources from WordPress plugin scripts. The Accessibility score within Lighthouse was 81, reflecting the contrast issues noted above but also confirming that structural elements — heading hierarchy, form labels, and button naming — were correctly implemented.

These findings identify two concrete actions for the next version of the site: (1) update the colour scheme to ensure all text-background combinations meet WCAG AA contrast standards, and (2) optimise images and reduce plugin load to improve mobile performance. The heading structure (H1 → H2 → H3) was implemented correctly throughout all pages, supporting both screen reader navigation and SEO.

Despite the contrast issue, several positive accessibility choices were made during development. All CTAs use descriptive button labels rather than generic 'click here' text. The FAQ page structures information in clearly labelled question-and-answer format, which is both screen-reader friendly and cognitively accessible for users with fatigue or concentration difficulties.

4.4 SEO Implementation

Search engine optimisation (SEO) was applied to increase the discoverability of Circadian Calm's content through organic search. The blog post 'How to Sleep After a Night Shift' was the primary SEO-targeted piece of content, as it targets high-intent informational queries from users actively seeking help with this specific problem.

On-Page SEO:

- Target keyword 'how to sleep after a night shift' included in the H1 heading, first paragraph, and meta description
- Secondary keywords used naturally throughout the body: 'night shift sleep tips', 'post-shift recovery routine', 'circadian rhythm shift work', 'caffeine and sleep'
- Structured headings (H2, H3) organise the content into crawlable sections; each heading answers a distinct user sub-query
- Internal links connect the blog post to the landing page (and vice versa), supporting crawlability and passing link equity between content formats
- The blog post URL is clean and descriptive: /circadian-calm/how-to-sleep-after-a-night-shift/

Content-Level SEO:

The blog post achieves good keyword density without stuffing. The 6-step structure creates opportunities to use related keyword phrases naturally within subheadings (e.g., 'Protect Your Light Exposure After Your Shift', 'Set a Caffeine Cut-Off Time'). The FAQ section at the end of the blog post directly targets question-based search queries, which are commonly featured in Google's 'People Also Ask' results.

Technical SEO:

The site uses WordPress with a clean permalink structure. All pages have unique titles and meta descriptions. The privacy policy and contact page contribute to E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness) signals, which are increasingly important for health-adjacent content in Google's Quality Rater Guidelines (Google, 2023).

A gap in the current SEO implementation is the absence of a structured data (schema) markup for the FAQ section. Adding FAQ schema to the blog post would increase the likelihood of earning featured snippet placements for question-based queries, which are highly common in this topic area.

4.5 Ethical Considerations

Digital marketing in the health and wellness space carries specific ethical responsibilities. Circadian Calm was developed with the following ethical principles in mind.

Medical Disclaimer: All content includes clear disclaimers that Circadian Calm provides educational guidance and is not a substitute for medical advice. This is particularly important in the sleep health space, where some users may have underlying medical conditions (e.g., sleep apnoea, insomnia disorder) that require clinical intervention.

GDPR Compliance (European Parliament, 2016): The email sign-up form collects only name and email address, which are the minimum fields necessary for communication. Users are required to actively check a consent box before submitting; consent is not implied. A privacy policy page clearly states what data is collected, how it is used, and that no data is shared with third parties.

Research Integrity: All health claims made in the blog post and FAQ page are supported by peer-reviewed research or guidance from credible public health authorities. Sources are cited using the Harvard referencing method within the content.

Inclusive Language: Content avoids stigmatising language around fatigue, sleep difficulties, or lifestyle. The tone remains supportive and non-judgemental throughout, acknowledging that shift work is often not a choice but an economic necessity.

4.6 Measurement Strategy

Although Circadian Calm has been live for a short period and no meaningful user data is yet available, a comprehensive measurement strategy has been developed to evaluate success once the site achieves sustained traffic. This strategy is directly connected to the SMART goal set in Section 2.5: achieving 50 newsletter subscribers and 200 monthly organic sessions within 6 months.

The table below outlines the key performance indicators (KPIs), the tools that would be used to track them, the targets set, and the timeframes for evaluation.

Metric	Tool	Target	Timeframe

Email sign-up conversion rate	WPForms / Mailchimp	≥ 15% of landing page visitors	3 months post-launch
Blog page sessions	Google Analytics 4	200 organic sessions/month	6 months
Average session duration (blog)	Google Analytics 4	> 2 minutes	3 months
Bounce rate (landing page)	Google Analytics 4	< 60%	3 months
Accessibility score	WAVE / Lighthouse	Zero critical errors	At launch and quarterly
Page load speed (mobile)	PageSpeed Insights	≥ 85 Performance score	At launch
Email open rate (newsletter)	Mailchimp	≥ 30% average	Ongoing from month 2
Click-through rate (newsletter)	Mailchimp	≥ 5% per campaign	Ongoing from month 2

Table 4: Measurement Strategy — KPIs, Tools, Targets and Timeframes for Circadian Calm.

Google Analytics 4 (GA4): GA4 would be configured with a conversion event for the email sign-up form submission, enabling direct tracking of the primary conversion goal. The Engagement report would be used to monitor session duration and pages per session, which are indicators of content quality. The Acquisition report would identify whether traffic is arriving organically (SEO success) or directly (brand recognition).

WAVE and PageSpeed Insights: These tools would be re-run quarterly to identify any regression in accessibility or performance as new content is added to the site.

Mailchimp Analytics: Once the newsletter is launched, Mailchimp's built-in analytics would track open rates, click-through rates, and unsubscribe rates for each campaign. A/B testing of subject lines would be implemented from the third issue to optimise open rates.

In the absence of live data at this stage, the evaluation focuses on qualitative signals: the content is well-structured and internally consistent, accessibility has been partially tested and improvement actions identified, and the SEO foundation is in place for future organic growth. The measurement strategy provides a clear framework for assessing whether these foundations translate into the quantified goals over the coming months.

6. Personal Reflection

Working on this project gave me the opportunity to apply what I have learned throughout the Digital Marketing programme in a way that felt both practical and personally relevant. One aspect I appreciated most was building a concept around night-shift workers — a group I belong to professionally. As a Brukerstyrt Personlig Assistent (BPA) whose shifts are primarily at night, this project allowed me to approach the content with genuine understanding of the challenges faced by this audience. That connection made the research and writing feel meaningful rather than purely theoretical.

I enjoyed the overall process of developing something from idea through to execution. Seeing how research, strategy, and content could be structured to support a specific audience at each stage of their buyer journey made the framework feel tangible. The SMART goal section in particular helped me understand why measurable objectives are not just a formality but the anchor that makes everything else evaluable.

At the same time, the technical side of the project was more challenging than I anticipated. Because Circadian Calm was built on the same WordPress domain and within the same hosting environment as my previous project, OneOhOne Jewelry, separating the two concepts proved difficult. Changes in templates or plugins sometimes affected both sites simultaneously, adding unexpected complexity close to the submission deadline.

To navigate this, I made a strategic decision to prioritise content functionality over visual perfection. Rather than spending excessive time on design refinements, I focused on ensuring that all required content formats were live, linked, and accessible. This decision came with a compromise: some of the original design choices for Circadian Calm did not reach the quality I initially planned. The contrast issue identified by WAVE testing reflects this — had there been more time, I would have resolved the colour scheme before submission.

The experience taught me a significant practical lesson: technical separation must be planned before development begins, not addressed reactively when problems arise. For future projects, I will use staging environments or separate domains to avoid cross-project interference.

Looking back at the evaluation criteria, I recognise areas where my first submission fell short. The SMART goal was action-focused rather than outcome-focused, the competitor analysis lacked specific competitor names, and the evaluation section described what was done rather than discussing why those choices were made and how they performed. This revised report attempts to address each of those gaps directly.

This project has strengthened my confidence in applying a structured digital marketing process end-to-end. It has also shown me that the gap between knowing a framework theoretically and executing it in practice is where the real learning happens — and I intend to carry that understanding into the next phase of my studies and career.
